

Lesson 2 App Launcher

In this lesson, you will learn about how to launch various applications in salesforce.

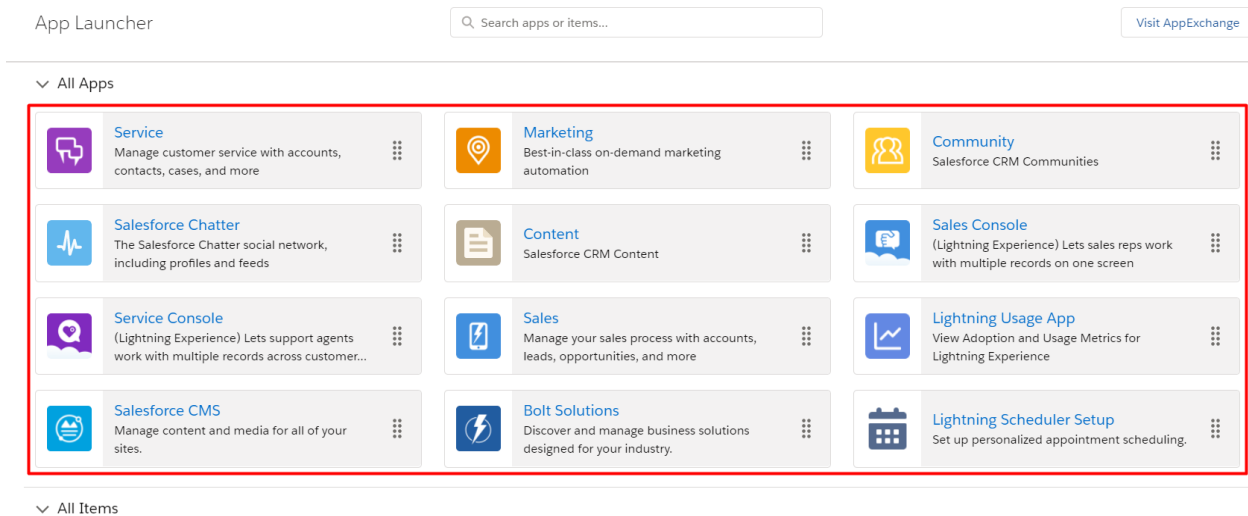

Step 1: If you want to open any application in salesforce you just have to click on the app launcher option given in the top left corner of the home page.

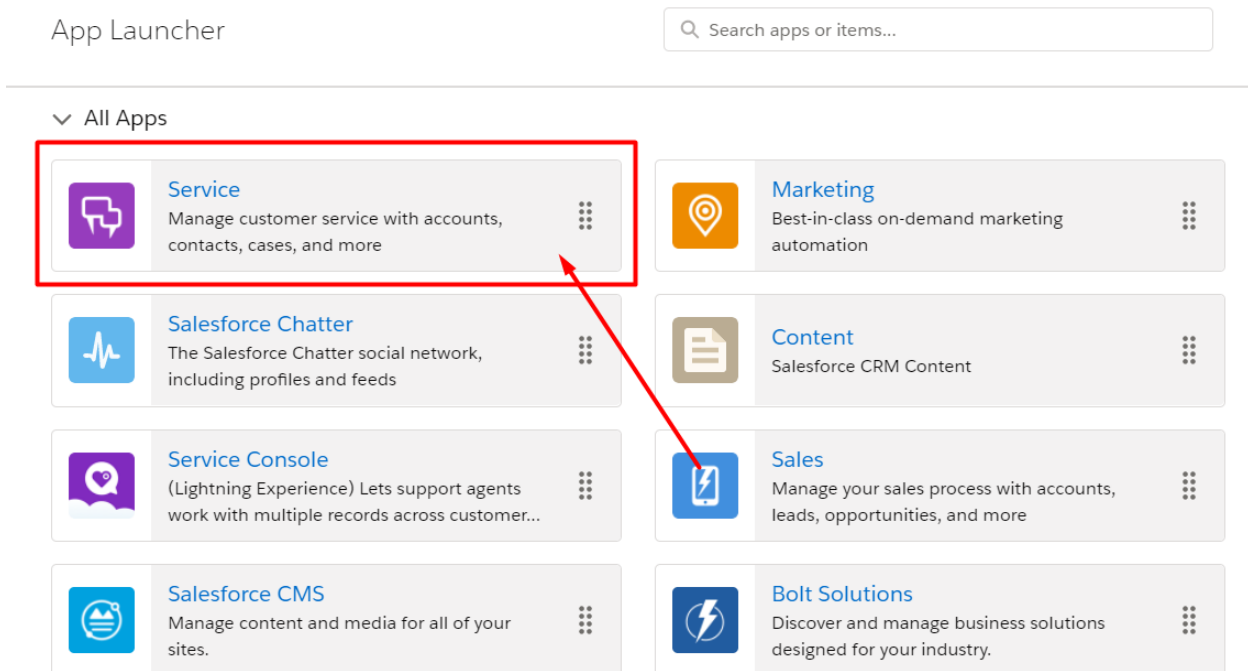

Step 2: Once you click on the app launcher you will be able to see various applications which are available.

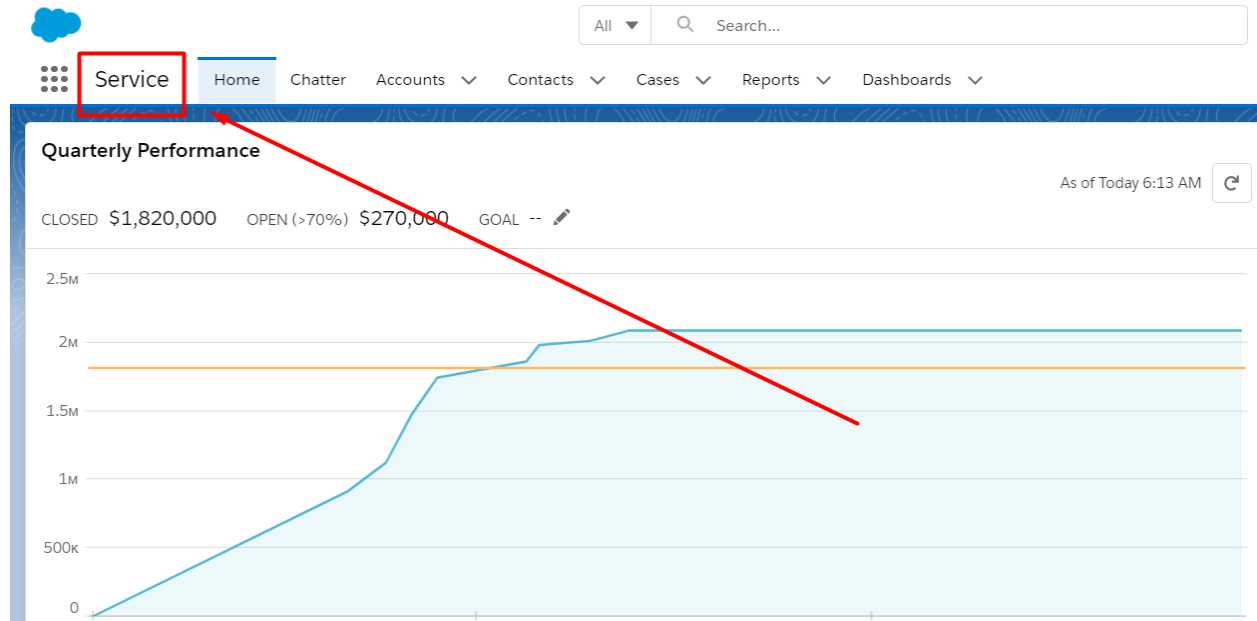

Step 3: As you scroll down you will be able to see the “View All” option when you click on view all you will be able to see various applications.

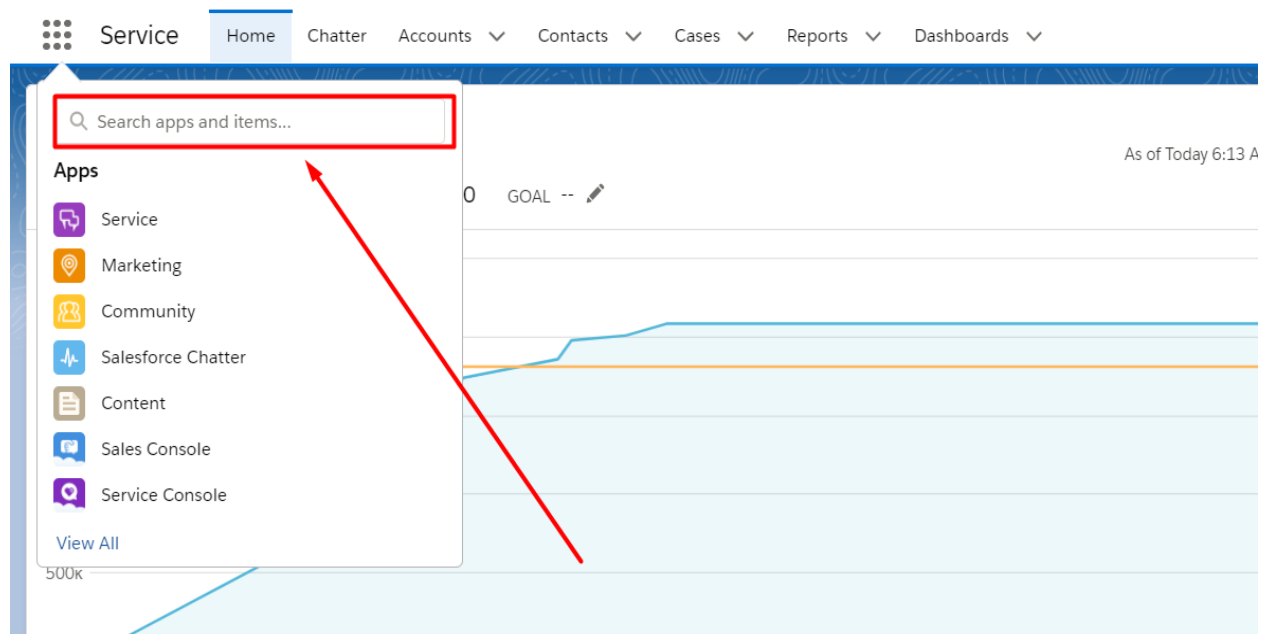

Step 4: In order to open any application you just have to click on it and it will direct you to that specific application page.

Step 5: Once you click on any application, for example, if you click on the service application it will lead you to its page where you will be able to see a few more options on the top which are home, chatter, account, contacts, cases, reports and dashboard.

Step 6: Once you are on the specific application page and want to go to any other application you can simply click on the app launcher and search it in the quick search option.

Step 7: When you create a developer edition instance in salesforce few applications will be given by default, these are readymade applications that can be customized as per the requirement of your client's need apart from this standard application later on you can create custom applications.

Applications

Developer Instance of Salesforce comes with Pre-Built Applications called **STANDARD APPLICATIONS**.

Note: You also have the ability to create custom applications.
