Lecture 3: Creating and adding new custom objects.

In this lecture you will learn how you can create and add different objects and fields in schema builder.

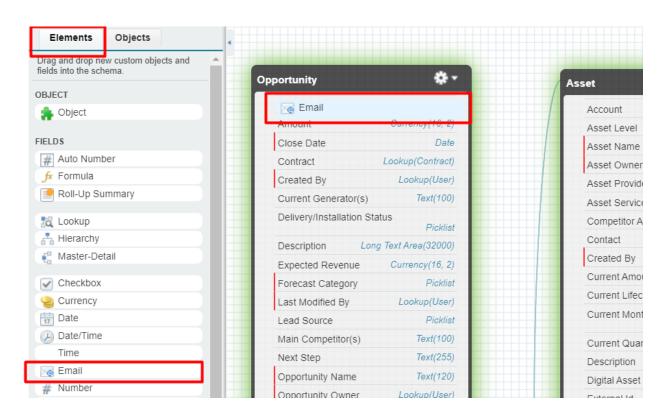

Step 1: In order to add a new custom object you have to click on the elements option and drag and drop the option object.

Step 2: As you drag and drop the object a list of details will come up which is to be filled and accordingly a new object will be created.

Step 3: Similarly if you want to add a new field you have to again click on the same option element and then click on the field you want to create, drag it and drop it on the object that you want to create the field for.

Step 4: As you drop the field on the selected object a message will pop up stating the name of the object that you are creating the field for and the field, also with certain information to be filled. In this way you can create new objects and fields in schema builder.

	- 1	Create Email Field (Object: Opportunity)		×	×
e	Lookup(Account)	Field Label		Lo	ok
	Currency(16, 2)	Field Name			
	Date Lookup(Contract)	Description
