**Step 1:** First step is to go to the quick find box and search for password policies and click to open it.

Step 2: As you open it on the next page you will see on this page you can set password restricts etc the options available here are first user password expire in here I am choosing 90 days, then I am leaving other things as it is and clicking on save as I click on save this password policy will be applicable for the entire organisation.
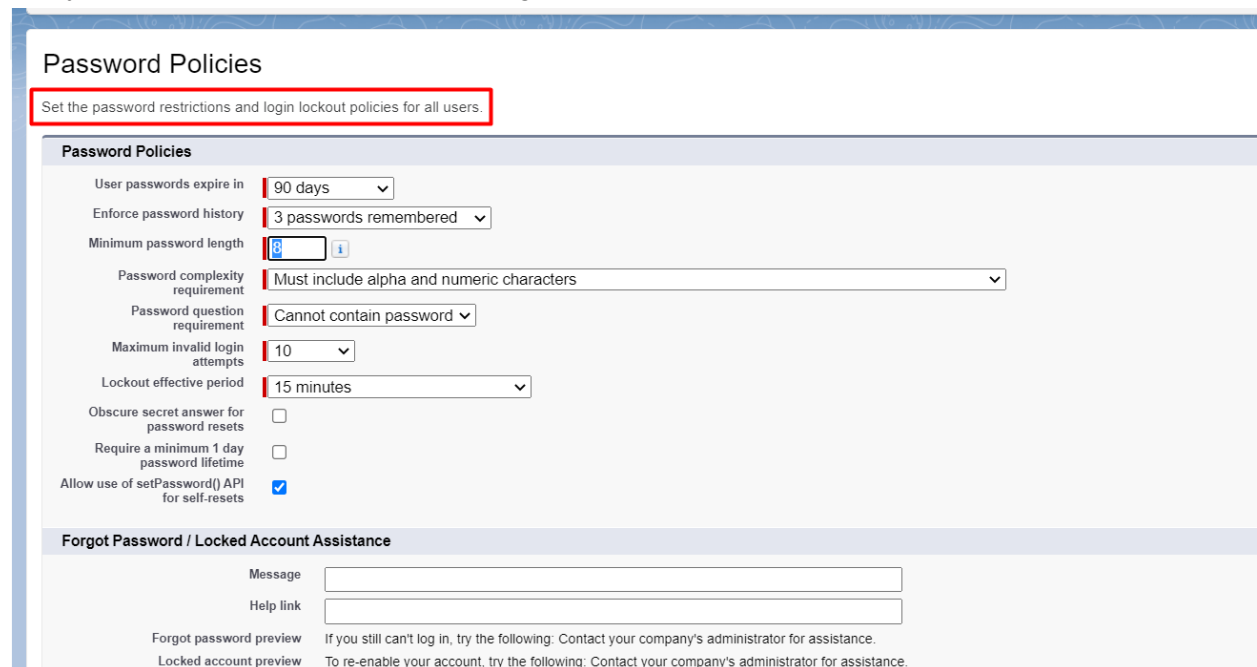

Step 3: Moving back to the quick find option and searching for profiles with this feature you can control what a user can have access for. So as you click on the profile option on the next page you will see several profiles and operations associated with it.

Step 4: For example if we open a standard user profile and edit the login hours so you can choose start and end day accordingly now moving further and opening login IP range so if this profile user login through this IP range then only they will be able to login. You can also edit options according to your need.
